# BRICK SLIPS

Demand for brick slips for use internally and externally in both commercial and domestic settings has grown significantly in recent years.

Whilst brick slips undoubtedly offer myriad exciting design possibilities and can have a huge impact on the ambience of the space in residential properties and commercial settings such as cafés, pubs, restaurants and office environments, it's the MMC market that is now realising the full potential of brick slips.

Combined with construction systems, brick slips enable light weight construction, with the timeless aesthetic appeal of brick even in high-rise applications and offer architects and developers almost limitless options when it comes to design and finish.

As the UK's largest brick manufacturer, Ibstock has been active in the MMC space for many years already, investing resources in the development of new products, systems and services to ensure our offering is at the forefront of the industry.

Whatever the project, you can trust Ibstock to deliver a solution.

A SOFT MUD BRICK SLIP

# WHY IBSTOCK BRICK SLIPS?

## KEY FEATURES AND BENEFITS OF OUR BRICK SLIPS

A1 Fire rated

F2 Frost rated

Compatible with our rigorously tested systems

UK Manufactured

Just in time delivery

Local materials for local vernaculars

Vast range of colours and textures

Bespoke sizes and bespoke profiles available

Manufactured for most facade systems

## ASPIRATION

- Taking the aesthetics from the past into the future, responding to the need for productivity through modern methods of construction systems for new build
- Creating a retrofit solution that not only meets energy performance requirements, but also gives new life to building aesthetics
- Making buildings safe by offering a choice of different systems that have been rigorously tested for performance and durability

# IMPORTANCE OF BUILDING SAFELY

Ibstock understands the importance to be compliant with the Building Safety Act 2022 and the Higher-Risk Buildings (Descriptions and Supplementary Provisions) Regulations 2023.

Our knowledge and diligent perception of materials selection are foundational duties in this regulation. High-rise blocks are mandated to maintain the golden thread of information, a comprehensive repository of accurate and up-to-date data crucial for ensuring building safety. Among the key elements contributing to this thread is the incorporation of brick slips, which serve as an essential factor in documenting the building's construction and facade details. Ibstock brick slips are digitally catalogued and securely stored, providing vital insights into the structural integrity and maintenance requirements of the building. Accessible to authorised personnel as needed, this digitised repository ensures that pertinent information, including brick slip specifications, remains readily available and comprehensible for effective decision-making and regulatory compliance. To support the integral components of the golden thread of specification we offer:

- Brick data sheets
- Tested to British Standards

# UNRIVALLED CAPABILITIES

Discover the future of precision and efficiency at Istock's Nostell site with our groundbreaking investment in automated brick slip manufacturing technology. Revolutionising the industry, this cutting-edge process ensures leading levels of speed, unparalleled health and safety standards, and the ability to automate intricate processes like brick slip corner and brick slip groove cutting.

By eliminating project bottlenecks, Istock's commitment to innovation at the Yorkshire-based site sets a new standard for excellence in the construction materials sector. Join us on the forefront of progress as we reshape the landscape of brick manufacturing, offering not just bricks but a seamless and advanced solution for facades projects.

At full capacity, the factory is capable of manufacturing more than 50 million brick slips per year.

The plant contains two operational lines.

**Line 1** - Automated facility to produce slips from bricks, making Istock the largest brick slip manufacturer in the UK, including brick slip corners - a provision many manufacturers lack.

## A UK FIRST! - NATURAL SLIPS

**Line 2** is a UK first, producing a range of Natural Slips from a modern plant utilising the latest ceramic technology, which delivers:

- The ability to manufacture brick slips at 15mm thickness, minimising wastage across the manufacturing process.
- Unrivalled finish capabilities, suitable for a wide range of developments and giving architects and builders more creative choice than ever before.
- The ability for rapid and flexible changeovers to different colours and textures, helping us work to much lower minimum order quantities for our customers.
- The flexibility and capability to match almost any product – an almost endless array of design possibilities.

When the site is at full operational capacity, it will have be able to manufacture enough slips for up to 10,000 modular homes per year – meaning Nostell will be at the heart of the UK's MMC boom.
